ABSTRACT

This study examined the perceptions of Master of Public Administration (MPA) graduates about public administration curriculum and their political acuity. Using data from a national survey on MPA graduate attitudes, it focused on the perceptions of 1,428 MPA graduates who were state administrators, 351 state administrators with bachelor of arts (BA) degrees in public administration, 332 state administrators who held certified public manager certificates, and 3,869 administrators without an administrative degree or training. The study found that respondents holding an MPA or higher degree rated organizational behavior and interpersonal relations, knowledge of political institutions, program evaluation, and policy analysis as more important than did respondents with a BA degree. Respondents with less that an MPA degree rated personnel management and public relations as more important than did respondents with an MPA degree. An appendix provides a copy of the survey questionnaire. (Contains 26 references.) (MDM)

Title: "MPA GRADUATES' VIEWS ABOUT MPA CURRICULUM AND

POLITICAL ACUITY: Findings from a fifty-state study (1990-1993)"

Authors: Professor Bruce J. Rose, Kentucky State University

Professor Manindra Mohapatra, Indiana State University

ABSTRACT

This research paper is an outcome of a 1992-93 NASPAA supported Cultural Diversity project designed to promote collaborative instruction, research and outreach activities between faculty members of four HBCU MPA programs and that of Indiana State University's MPA program. Utilizing a sub-set of a fifty-state survey data set collected by the Research Center for Public and International Policy at Kentucky State University (HBCU) (NSF Grant No. RII 9006583) this paper analyzes the perceptions of MPA graduates about Public Administration curriculum and their political acuity (Daniel and Rose, 1991). The data includes a comparative analysis of MPA graduates (N=1,428) who are state administrators, state administrators that hold a BA degree (N=351) in public administration, state administrators that hold a Certified Public Manager (CPM) certificate (N=332) and those administrators who do not hold any significant administration degree or training (N=3,869). The data analysis indicates some attitudinal differences between these groups. These preliminary analyses do not control for other independent and intervening variables. These findings should be of interest to the NASPAA community. It is also an example of direct collaborative research between the historically black university MPA faculty members and that of Indiana State University which had received NASPAA funding to promote such collaborative effort.

INTRODUCTION

This is a collaborative research effort between Kentucky State University faculty members and Indiana State University's Center for Government Services. This report is the outcome of a 1992-93 NASPAA sponsored cultural diversity project designed to promote collaborative research and outreach projects between Indiana State University and four HBCU universities (i.e., Kentcky State University, Howard University, Clark Atlanta University and Jackson State University).

II RESEARCH OBJECTIVES

Using available data from a national study conducted by the Research Center for Public and International Policy at Kentucky State University (HBCU), in part the researchers have attempted to seek answers to the following questions.

- a. How do practicing public administrators in the American states and territories perceive Public Administration graduate curriculum?
- b. Do MPA degree holders view Public Administrative graduate curriculum differently from those with only a BA.
- c. How do public administrators perceive the political environment surrounding public agencies? Does it reflect their political acuity? (Daniel and Rose, 1991)

III DATA SOURCES

In order to insure that a significant size sample of state public administrators having earned the MPA degree and/or CPM certificates, lists were solicited from all universities and state supported programs in the fifty-states and Puerto Rico. Additional lists were solicited from personnel directors in the fifty-states and Puerto Rico.

Of the 241 requests sent to MPA granting universities, only 41 cooperated. Six of the ten CPM programs directors provided lists. Personnel directors from seven states and Puerto Rico provided mailing lists. Mailing lists for the remaining states were generated from names and addresses found in the *State Executive Directory* published by the Carroll Publishing Company of Washington, DC. Table 1 below contains the sample sources, number of questionnaires mailed, number returned and percentage returned.

As can be seen in Table 1 the data set contains a substantial number of responses from state public administrators across the U.S. Although requests for demographic data was minimal, enough information was collected to make inferences that were felt important. Table 2 below contains a general description of the sample's characteristics.

Table 2 projects a general profile of public managers who participated in this study. A majority of the participants are male (69.8%) with less than one third (30.2%) are female. Slightly over 86% of the participants are of European extraction, trailed by African-Americans (4.8%), Asian or Pacific Islanders (2.9%) and Hispanics (2.6%). Age distribution among the respondents shows the largest proportion to be between the ages of 40 and 59 years (75%), with 91.4% being 59 years old or younger.

The sample data indicates that over one half (58.7%) have earned at least one graduate degree, and 10.1% have some graduate work. Another 21.9% have earned a baccalaureate degree of some type. Only 9.3% report an education history of less than a college degree. Overall state public administrators, according to this sample, seem to be a very literate group; however, almost one half of the respondents (49.7%) have not had any training or education related to public sector management.

When asked about their job responsibility, 58.9% of the respondents selected the administrative/professional category as best describing their functions. Another 24.5% being responsible for supervisory chores.

An item on the questionnaire asked respondents to classify their organization. Nearly three quarters (71.1%) labeled their units as a people/service oriented agency. Twenty four percent labeled their units as data/paper units, while the remaining 4.9% selected machine/production.

The data show that 68.2% reported supervising 50 or less individuals. Another 18.9% indicated they supervised 51 to 200 employees, with the remaining 12.0% supervising over 200 individuals.

Well over one half of the respondents (58.6%) indicated they occupied a classified position in their state's merit or civil service system. Slightly over one quarter (25.6%) of the sample reported occupying an appointed position (i.e., political). A surprisingly large number indicated being employed by some other means than the normal categories (e.g., elected, appointed, merit). Upon investigation, it was discovered that other than some unusual contractual situations, many individuals employed in states such as Texas that does not have a merit system in the popular sense selected this category. Also, many individuals selected this category that described themselves as civil service appointees. Less than one percent (.7%) were elected to their position.

The seniority distribution among these public managers shows that only 17.8% have fewer that 10 years of service. A majority of the respondents (71.5%) reported between 10 and 29 years of service.

The general profile of this sample is that of a college educated and veteran work force. Most of them function in a people-service oriented organizational surrounded mostly by white males. Minorities and women comprise a relatively small portion of the sample.

IV DATA ANALYSIS AND DISCUSSION

Please keep in mind that this is a working paper and the following statistics and discussion represent a very abbreviated description of the data.

Perception of Public Administration Curriculum

The self reporting questionnaire used to collect the data for this study consisted of six (6) sections. Section 4 (see Appendix I) contained items to be answered only by individuals that have earned at least a BA degree in public administration. These items are listed below.

SECTION IV

20. Listed below are some fields of knowledge that have been included in Public administration degree programs. To what extent do you feel knowledge of each of these fields is necessary and important in your job as a public administrator? (Please circle the appropriate number)

		Very Important		Not Important		
a.	Organization behavior and interpersonal relations	4	3	2	1	
b.	Knowledge of political institutions and processes in state government	4	3	2	1

An investigation of Table 3 has led to the belief that differences between the Mpa and Baccalaureate samples might exist for six (6) of the ten (10) items. The sample of respondents that hold a MPA or higher degree feel that following areas of knowledge are more important than do their Baccalaureate counterparts.

Organizational behavior and interpersonal relations Knowledge of political institutions and processes in state government Program evaluation and research methodology Policy analysis

On the other hand, respondents with less than a MPA degree reported feeling the following knowledge areas more important than do their MPA counterparts.

Personnel management
Public relations and communication

Both samples seem to agree on the relative importance of the remaining four (4) knowledge areas. Consensus was also reached about the unimportance of studying statistical analysis. This condition is somewhat surprising, considering we are in the midst of the information era.

It should be indicated that distribution of all responses tended to favor the important and very important levels. This suggests that areas of knowledge being addressed by public administration academic programs are seen as appropriate. Differences that appear to exist between the MPA and Baccalaureate samples is not explainable with the present analysis. However, prior work suggests that these variances may be more related to the aging process than anything other variable (Mohapatra et. al., 1990).

Political acuity

Daniel and Rose (1991) reported the identification of a trait thought to be part of the public administration professional socialization construct. Evidence for this inference was found among data collected as part of a survey of Kentucky state public administrators. Because of what seemed to be an important finding, an effort to better understand this phenomenon was made in the present study. To seek support for this trait additional items were added to the questionnaire.

The following items in the first section of the questionnaire were written expressly for the above purpose.

15

1. As a state public administrator, how important do you believe it is to keep currently informed of the following? (Please circle appropriate number)

k. l.	Minority groups and their views on policy issues General developments in the	4	3	2	1
	profession of public administration	4	3	2	1

An exciting result occurred when data from the present study were submitted to the same statistical treatment as was performed for the Kentucky study. A detailed report of the process and outcomes are presently underway as part of the final report to the National Science Foundation (Grant No. RII 9006563). The following is a brief overview of what has been found to date.

A priori, it was thought that the items found in the question shown above would all load heavy on a single factor (i.e., a political acuity factor). This was the case with an abbreviated question on the questionnaire used for the Kentucky study. However, this was not to be. Instead of a single factor, three (3) factors were found to exist, with all three making sense. Table 4 contains groupings for the three factors.

Table 4 Political Acuity Factors

• Factor One (Socio-political)

Minority groups and their views on policy issues
Public sector labor relations
Foreign affairs involving the U.S.
General developments in the profession of Public Administration
Election voting patterns
Public opinion poll results

• Factor Two (Political Activity)

Legislative candidates and their views Executive candidates and their views

• Factor Three (Political Function)

Elected executives and their views Legislators and their views

The factor names were hastily assigned and are likely to be altered for the final report; however, no argument can be posited against their existence. For this paper, a one-way Multivariate Analysis of Variance (MANOVA) was performed using training category as the reference variable and composites of the items as they loaded on the specific factors as the criteria. Table 5 below contains the MANOVA results.

Table 5 MANOVA of Training Type by Political Acuity Factors

Multivariate Tests of Significance (S = 3, M = 0, N = 2841 1/2)

				•	
Test Name	Value	Approx. F	Hypoth. DF	Error DF	Sig. of F
Pillais	.01135	5.39909	12.00	17061.00	.000•
Hotellings	.01142	5.40739	12.00	17051.00	.000
Wilks	.98868	5.40440	12.00	15041.39	.000
Roys	.00731				

^{*} Significant at Alpha < .00001

As can be seen in Table 5, a statistically significant difference was detected for at least one of the dependent measures. Univariate F tests were next performed in order to determine where the differences occurred. Table 6 below contains these results.

Table 6 ANOVAs for Training Type and the Political Acuity Factors

Univariate F-tests with (4,5687) D. F.

Variable	Hypoth. SS	Error SS	Hypoth. MS	Error MS	F	Sig. of F
Socio-Polit. Political Act. Political Fun.	14.48059	2118.84970	3.62015	.37258	9.71649	.000*
	12.01014	3588.91238	3.00254	.63107	4.75783	.001*
	1.11827	1858.90474	.27957	.32687	.85529	.490

[•] Significant at Alpha < .05

The ANOVAs reveal that statistical significant differences because of training occurred for two of the three factors (i.e., Socio-Political Acuity Political Activity Acuity). In order to determine the nature of these differences, Scheffe multiple range test was performed and reported in Tables 7 and 8 below.

The Scheffe Multiple Range test for the Socio-Political Acuity factor suggests that training and/or education does make a difference how state public administrators feel toward knowledge of the general mood of the public. While all levels of the independent variable reported slighty positive attitudes, those groups with some kind of education/training were moderately more positive (see Table 9). The differences for the Political Activity Acuity factor seem to result, in a positive direction, from CPM training (see Table 8). The CPM sample differs from the MPA and None samples but not from the Baccalaureate or Other samples (see Table 10). What this condition indicates is not clear at the present. When the other independent and intervening variables are analyzed more may be said.

None	2.981	.810	2832
For entire sample	2.996	795	5692

V CONCLUSIONS

This brief analysis of a very small part of a comprehensive national study suggests that education and training programs in public administration do produce some attitudinal and perhaps some value changes. Hopefully, these changes are positive and concommitantly affect performance. Further insight into the structural nature of the professional socialization process (i.e., political acuity) was gained. Additional inferences must await the complete analyses of these data.
